

TELMAR NETWORK TECHNOLOGY CERTIFIED PRE-OWNED PRODUCTS

RELIABILITY AND QUALITY WITH SIGNIFICANT SAVINGS

Network reliability is key to maintaining your customer base and providing the highest quality services to end users. But how do you maintain your network's reliability and quality of services cost effectively? Or extend the life of your network while reducing CAPEX and OPEX costs?

Telmar's Certified Pre-Owned products can help reduce the cost of maintaining your network 30 to 70% without sacrificing your network's reliability or quality of services. We can pass CAPEX and OPEX savings on to you as a result of our multi-million-dollar Certified Pre-Owned inventory of wireline, wireless and enterprise equipment.

When you purchase a pre-owned product from Telmar, you receive a product that has been certified to the highest quality standards, ensuring its durability needed for your critical network applications. Each Telmar Certified Pre-Owned product is fully inspected and tested on functional repair systems to OEM specifications. Once a product has passed the OEM test beds, it then goes into our inventory. Before a product is shipped, it must pass an out-bound quality check, and only then is a warranty-traceable barcode label placed on the product. All of Telmar's Certified Pre-Owned products are sold with at least a one-year warranty.
