

TELMAR NETWORK TECHNOLOGY REVERSE LOGISTICS & WAREHOUSING

CUSTOMIZED LOGISTICS & WAREHOUSING SOLUTIONS

Telmar provides custom logistics and warehousing telecom solutions for manufacturers that achieve significant savings in inventory and transportation management. This allows our customers to focus their critical resources on core business and high-value products and services.

Our inventory management services include our leading Spare Parts Management program, collaborative planning, procurement and materials sourcing, traditional inventory management, warehousing services, and hub operations. Each location can serve as a Technical Operations Center for equipment screening and testing activities.

Achieve significant savings in inventory and transportation with Telmar's customized logistics and warehousing solutions.

Our transportation management services are designed to streamline cost and optimize your carrier and network selection and routing. Telmar provides inbound/outbound materials management, merge in-transit services, optimal route and network selection services, carrier selection and routing, tracking, trade compliance and help optimize tariff issues.

At Telmar, we also manage complex models and configurations across your supply chain and product lines. We pre-configure systems for inventory and configure to order (CTO) to help you meet your customer's unique requirements and demands.
